Allowable Subject Matter

The following is an Examiner's statement of reasons for the indication of allowable subject matter:

Applicant(s) claimed invention is directed to a process for the synthesis of ion imprinted polymer particles for solid phase extraction preconcentration of erbium ions.

The art of record demonstrates a method for detecting analytes where the polymer possesses a lanthanide ion such as erbium, which are imprinted to bind chemical functionality. The claimed invention differs from that of the prior art in that the formation of the ion imprinted polymer consist specifically of a mixed ligand ternary complex of erbium imprint ion of 5,7, dichlorquinoline-8-ol and 4 vinyl pyridine. The prior art, while teaching the use of a vinyl substituted chelate, does not disclose a ternary complex or, more specifically to the claimed invention, does not disclose the particular erbium imprint ion of 5,7, dichlorquinoline-8-ol and 4 vinyl pyridine as well as the particular steps form such. Consequently, the resulting moieties are different. Note the moiety in figure 3 of the prior art '092 and that of figure 3 of applicants' specification.

Any comments considered necessary by applicant must be submitted no later than the payment of the Issue Fee and, to avoid processing delays, should preferably accompany the Issue Fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
